# About DJ Turfcare

David Jenkins

**DJ Turfcare is a family business owned by me - David Jenkins - and my family. I firmly believe that the qualities of care, dedication and ethics, intrinsic in a private concern, combine to offer our customers a high level of service. This together with our desire to enhance our environment is the cornerstone of our company.**

I have been involved in the turf industry for more than 40 years. This time has enabled me to take up opportunities like working with Viano for whom we are the sole UK agent and distributor. Viano have a wide range of organic and organic based fertilisers. By working closely with Viano we have been able to build up a growing awareness that using organic based fertilisers to feed lawns not only provides the best results but also enhances the environment. This fact has been recognised by the RHS who have endorsed many of our products.

Barbara Jarman

Here at Dunsfold we have assembled a range of top-class products outlined in this brochure which explains just what they can do for you. I do hope that by using them you will be able to have an excellent lawn for you and your family to enjoy.

**Barbara Jarman** is in charge of administration and is an integral part of the service we provide. Having worked in the industry for over 20 years, and having met many customers at trade shows, she has a depth of experience which makes her ideally qualified to deliver our high level of customer service. We use DHL carriers for most of our deliveries and try to make sure that orders are delivered within three to seven days.

Stephen Parry

**Stephen Parry** looks after the sales accounts throughout the UK. Having worked in the industry for the last 40 years, dealing with amenity and retail accounts, he has built up a wealth of knowledge on turf associated treatments that are available to retailers. He fully appreciates the training needs required by retailers and the best way this can be delivered.

We are extremely proud to offer Viano's many unique products that solve consumers lawncare issues in a safe and natural way that works in harmony with nature.

I hope you enjoy reading our brochure.

Best regards

**David Jenkins**

The late

## **Eddie Seaward** MBE, NDT

**Past Head Groundsman, All England Lawn Tennis Club, Wimbledon.**

**Past Patron Institute of Groundsmanship.**

**Past Patron Land Drainage Contractors Association.**

Throughout the whole of my life I have enjoyed working with nature and I have always wanted to enhance the world in which I live, particularly in the course of my work. It is good to see attitudes changing towards organic products and methods.

Organic fertilisers which contain soil friendly microbes can, and do, play a large part in this and it is here that Viano makes a major contribution. Their fertilisers are not only organic and enhance the soil, but they are manufactured using solar energy and are available in the UK from DJ Turfcare.

I have tested their products and find that they really do what it says on the tin, so I have no hesitation in recommending their use.

# MO Bacter

## MO Bacter - the organic based fertiliser for lawns (which also removes moss).

MO Bacter is an organic based fertiliser which will feed your lawn for 100 days, destroys moss without turning it black and removes the need of raking out the dead moss.

MO Bacter is not a moss killer in the sense that it does not contain any chemicals. It destroys moss by indirect action. That is the moss over feeds on the potash in the fertiliser and because it has a low tolerance of salts it dies. When it dies it will not go black but turns a gentle brown which quickly disappears.

MO Bacter contains a very safe bacteria called Bacillus sp. which is found normally in the soil. This Bacillus digests dead organic matter and converts it into plant food. Some of the dead moss will be removed during normal mowing the rest will fall back into the thatch layer where it is consumed by the Bacillus removing the need for raking out.

Most other moss killers rely on sulphate of iron to control moss. Sulphate of iron is a contact killer and does not destroy the entire plant where as MO Bacter destroys the moss plant completely. MO Bacter stimulates fresh grass growth which will help to fill in the areas where moss has been removed.

As MO Bacter contains no harmful chemicals you can over seed about 4 weeks after applying it to fill in any bare patches.

Remember to scratch up the soil before seeding and put a thin layer of soil over the top of the seed to help retain moisture. Try to keep birds away particularly in the Spring when they are busy feeding their young.

MO Bacter is organic based and if applied correctly it will not scorch the lawn even if it does not rain after application. Having said this MO Bacter does require wetting before it becomes active.

*Raking out your moss is now a thing of the past!*

**Active bacteria transforms dead moss into feed**

**No raking out**

**Safe for children and pets**

**No black mess or staining**

**100 Days of lawn feed**

### An RHS endorsed product

**20kg treats up to 200m<sup>2</sup>** depending on local conditions.  
Available in 4kg, 10kg and 20kg.

J F M A M J J A S O N D

Composition: NPK 5-5-20 (+3MgO) plus Bacillus sp

10kg  
treats up  
to 200m<sup>2</sup>

*For healthy  
growth, and  
good colour.  
A pick me  
up from  
winter  
stress.*

**Greens and  
thickens your  
lawn in days**

**Produces good  
drought resistance**

**Will feed your  
lawn for 100 days**

**Safe for children  
and pets**

**Natural occurring  
bacteria converts  
thatch into plant  
food**

## Lawn Boost

### Lawn Boost - the organic based fertiliser for lawns (with no moss).

Lawn Boost is an organic based long lasting fertiliser with added magnesium and iron which gives good strong green colour. It stimulates healthy growth and helps to protect the grass against disease and drought.

Lawn Boost is the ideal treatment to give your lawn a quick start after the winter weather and to keep it healthy throughout the growing season.

Being organic based it will not scorch your lawn when applied correctly even if it does not rain. However, it does require rain or irrigation to activate it so water if it has not rained for a week.

### An RHS endorsed product

10kg treats up to 200m<sup>2</sup> depending on local conditions.  
Available in 10kg.

J F M A M J J A S O N D

Composition: NPK 16-3-8 (+2MgO)+1Fe plus Bacillus sp

# BIO-Lime

## BIO-Lime raises the pH level in lawns and prevents moss encroachment.

BIO-Lime is a product that will help to keep your lawn soil sweet. Over time our lawns become acidic due to normal mowing, plant activity and acid rain. As this happens the pH is reduced i.e. it becomes more acid and sour.

Sour soils become stagnant, oxygen is lost, the grass struggles to take up nutrients whilst moss finds this to be the ideal environment to thrive.

BIO-Lime will raise the pH levels, counter-acting the acidity in the soil and creating a healthy growing environment where grass can take up the nutrients and out-compete any moss encroachment.

BIO-Lime can be used at almost anytime although it is best used in the Autumn, Winter or Spring.

BIO-Lime contains a naturally occurring bacteria called Bacillus sp which digests thatch as long as the soil temperature is above 5 degrees centigrade, helping to keep the area around the base of the grass plant healthy.

BIO-Lime contains Magnesium which is particularly important during the Winter period as it helps to keep the grass green when it would normally go off colour.

BIO-Lime is safe for children and pets but like all fertilisers pets should not eat it. It is perfectly safe to add grass clippings to the compost heap.

BIO-Lime is in coated pellet form (not powder) which makes it easy to apply using a standard spreader or by hand in which case we would recommend wearing gloves.

If it spreads onto flowerbeds it will not harm the plants, although care must be taken to ensure that it is not applied near Ericaceous plants or shrubs.

*Contains bacteria which digests the thatch within the lawn.*

**BIO-Lime is in coated pellet form**

**Makes acidic lawns healthy**

**Healthy bacteria digests the dead material in your lawn**

**Magnesium for extra green grass**

**Easy to use**

### An RHS endorsed product

**20kg treats up to 400m<sup>2</sup>** depending on local conditions.  
Available in 5kg and 20kg.

J F M A M J J A S O N D

Composition: Granulated calcium carbonate (+5MgO) plus Bacillus sp.

10kg  
treats up  
to 200m<sup>2</sup>

*Improves  
nutrient  
uptake in  
stressed  
conditions.*

**Destroys moss  
by indirect action**

**Greens, thickens  
and strengthens  
the grass**

**Intensive feed for  
up to 100 days**

**Safe for children  
and pets**

**Humifirst  
stimulates  
stronger roots**

# Autumn Lawn Treatment

**Autumn Lawn Treatment for Autumn  
recovery, Winter defence and Spring health.**

Autumn Lawn Treatment is an organic based long lasting fertiliser with added Humifirst. Stimulates root growth and prepares the grass against adverse conditions such as stress, waterlogging, snow or scarification giving your lawn the best start in the Spring.

The granular formula is best applied using a wheeled spreader or evenly by hand.

An ideal treatment for moss, contains a high potash content and the moss dies by indirect action. Added Magnesium will strengthen the grass and ensure a strong green colour.

**An RHS endorsed product**

**10kg treats up to 200m<sup>2</sup>** depending on local conditions.  
Available in 10kg.

J F M A M J J **A S O N** D

Composition: NPK 6-6-16 (+2MgO) plus Humifirst

*Recovery  
is also  
the ideal  
pre-seeder!*

**New side shoot  
growth to thicken  
your lawn and fill  
in bare patches**

**Intensive feed for  
up to 100 days**

**Safe for children  
& pets**

**Ideal before  
seeding or when  
laying turf**

**Use in Spring,  
Summer and  
Autumn**

**Unique Humifirst  
ingredient actively  
stimulates strong  
roots**

## Recovery

### Recovery restores your stressed lawn from root to leaf.

Recovery is the product to use if your lawn has been under stress either due to drought, flooding, hard play, neglect, scarification, or a combination of these factors.

Recovery is organic based and contains a unique formulation of humic and fulvic acids, which stimulate the grass roots to take up the nutrients in the fertiliser. They also stimulate the microorganisms which are found naturally in the soil. These microorganisms are essential for healthy plant growth and help to break down the fertiliser pellets and move the nutrients through the soil to the grass roots.

Recovery produces strong healthy grass roots which are the key to a good looking lawn.

It's the roots that provide nourishment to the leaf and maintain a healthy plant which will out-perform competition from moss and weed encroachment.

Recovery will feed your lawn for 100 days. It contains both quick release and slow release elements to maintain a healthy green lawn with a visible improvement within 3 days and keeps it strong during the very period that it is in high demand.

Recovery has Magnesium added which hardens off the grass and gives it that deep green colour.

Recovery is the ideal fertiliser for pre-seeding. Spread Recovery at a rate of 50-100 grams per square metre 7 to 10 days prior to seeding and water in thoroughly.

Recovery is the ideal feed for newly laid turf. It can be applied to the bare soil and raked in at an initial rate of 50-100 grams per square metre and watered in 7 to 10 days prior to laying the turf.

After 8 weeks a maintenance rate of 50 grams per square metre will encourage additional side shoots development and a rich deep green colour.

#### An RHS endorsed product

**20kg treats up to 400m<sup>2</sup>** depending on local conditions.  
Available in 4kg, 10kg and 20kg.

J F M A M J J A S O N D

Composition: NPK: 8-6-13 (+3MgO) plus Humifirst

*Ideal for spot treatment of lawn moss.*

## MO Bacter INSTANT Lawn Tonic

**100% organic liquid - INSTANT moss remover for your lawn.**

- MO Bacter INSTANT will destroy moss in just 24 hours.
- Completely safe to use on lawns used by children and pets.
- It can be applied by sprayer or watering can with a fine rose fitted.
- 9 parts water needs to be added to 1 part concentrate to make up to 20 ltrs of ready to apply product.
- Can be applied straight after mowing.
- Reseeding can be done once dead moss has been removed.

**An RHS endorsed product**

**2L treats up to 250m<sup>2</sup>** depending on local conditions.  
Available in 2L.

Composition: NPK 1.5-0-6

*...durable construction with pneumatic tyres...*

## Rotary Spreader

**The Viano Spreader has a 25 litre green Hopper and is ideal for spreading fertilisers.**

It is designed to be pushed at an average speed of 2.5 miles per hour which is normal walking speed. This spreader comes partially assembled in a cardboard carton.

The Viano Spreader is made of strong and durable material with pneumatic tyres and wheels of 30cm diameter and will spread dry fertilisers evenly over the area to be treated.

It includes a cover and a hopper screen to break up the crumbs.

This Spreader is not suitable for spreading powders.

The maximum spreading range is 3 – 3.5 metres.

**Visit [www.djurfcare.co.uk](http://www.djurfcare.co.uk) and view the step-by-step assembly video**

## Viano

**Situated in the heart of Belgium, a short distance from Brussels, Viano manufactures a wide range of organic and organic based fertilisers.**

Viano's vision is one of creating and manufacturing sustainable products which will enhance the environment. One way in which the company works with the environment is to generate its own electric power using solar panels on the roof of the factory.

Another is to produce fertilisers which are not only organic by nature but also child and pet friendly.

The company was established in 1948 and since then has built a European wide reputation, which is second to none.

As a result of substantial investment, the modern factory produces in excess of 20,000 tons of fertiliser a year and can produce up to 150 tons a day. The plant is run by two, to be at the height of the season, three teams. In this way Viano can ensure that it keeps to its production targets, which in turn means that it is able to meet its delivery dates and customers are never kept waiting even during the height of the season.

Quality is another top priority. Viano only use raw materials with consistent analysis and composition. Every delivery of raw materials is analysed and checked to make sure that it is correct. This continues throughout the manufacturing process making the final product fully traceable, certificated and registered as a premium quality product. Internal and external laboratories are used for these inspections. This commitment to quality control provides Viano with a hallmark which guarantees the high quality of the final product. A fact which is recognised by the Royal Horticulture Society who are pleased to endorse many of their products.

Viano's organic fertilisers are manufactured using raw materials like bonemeal, animal blood, soyameal, feather meal, rock phosphate, vinasses, organic seaweed, and hoof & horn meal. They do not contain any chemical additions and release their nutrients gradually feeding plants over a period of up to 100 days.

Customers considering all these factors would be right to conclude that Viano products are good for the environment, good for the garden and an ideal product for them to add to their shopping list.

<b>Spreader Settings</b>

<b>NORMAL APPLICATION</b>	<b>MO Bacter normal application</b>	100-150gm	32 twice	15 once	7 twice	23 twice	9 twice
	<b>Lawn Boost normal application</b>	50gm	32 once	7 once	7 once	23 once	9 once
	<b>Autumn Lawn Treatment normal application</b>	50gm	32 once	7 once	7 once	23 once	9 once
<b>MAINTENANCE APPLICATION</b>	<b>Recovery maintenance application</b>	50gm	32 once	7 once	7 once	23 once	9 once
	<b>Universal Lawnfeed maintenance application</b>	50gm	32 once	7 once	7 once	23 once	9 once
	<b>BIO-Lime maintenance application</b>	50gm	32 once	17 once	7 once	26 once	10 once
<b>INTENSIVE APPLICATION</b>	<b>Recovery intensive application</b>	100gm	32 twice	15 once	7 twice	23 twice	9 twice
	<b>Universal Lawnfeed intensive application</b>	100gm	32 twice	15 once	7 twice	23 twice	9 twice
	<b>BIO-Lime intensive application</b>	100gm	32 twice	17 twice	7 twice	26 twice	10 twice

When more than one application is made it is best to apply the second spreading at 90 degrees to the first. These spreader settings are for guidance only.

Some spreaders are more accurate than others so for this reason we always suggest that you check the delivery rate before applying the fertiliser.
